## HUNTINGTON ROTATING MARKETS FUND HAS ROTATED TO NASDAQ 100 FROM DOW JONES INDUSTRIAL

**COLUMBUS, OHIO**—Huntington Rotating Markets Fund recently rotated its investments from Dow Jones Industrial Average ("DJIA") to NASDAQ 100 after evidence that the NASDAQ 100 may be positioned to outperform the S&P 500. NASDAQ 100, which includes 100 of the largest domestic and international non-financial companies listed on the NASDAQ, appears to offer the best combination of risk and return potential.

"As the markets have begun to gain momentum, the NASDAQ 100 began to be a more attractive place to be," said fund manager, Paul Koscik. "The NASDAQ 100 Index is typically sensitive to the U.S. and global economy, since 83 percent of the index is comprised of technology or consumer discretionary companies. Historically, the index tends to outperform when the economy is strengthening."

Since August 2010, Huntington Rotating Markets Fund has been tracking the DJIA. During this time, the Fund captured opportunities this segment of the market had to offer. In 2011, the Fund outperformed the S&P 500 by 4.5 percent.

The Rotating Markets Fund rotates investments among four major market segments: large cap, mid-cap, small cap and global. The Fund Manager attempts to identify the most promising market sectors, and keeps the fund invested in areas that he believes offer the greatest return on investment.

This is the seventh rotation since Huntington Rotating Markets Fund launched in May 2001.

| | Average Annual Total Return (%) as of 3/31/2012 | | | | |
|---|---|---|---|---|---|
| | 1-year | 3-year | 5-year | 10-year | Expense Ratio (%) |
| Rotating Markets Fund (Trust Shares) | 9.74 | 22.32 | 0.58 | 4.53 | 1.40 |

| | | | | | |
|---|---|---|---|---|---|
| S&P 500 Index | 8.54 | 23.42 | 2.01 | 4.12 | |

*The Fund's past performance does not guarantee future results. The investment return and principal value of an investment in the Fund will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance of the Fund may be lower or higher than the performance quoted. Performance data current to the most recent month end may be obtained by calling 1-800-253-0412.*

NASDAQ 100 Index: An index composed of the 100 largest, most actively traded U.S companies listed on the NASDAQ stock exchange.

S&P 500 Index: An unmanaged index generally representing the performance of the broad domestic economy, through changes in the aggregate market value of 500 stocks, representing all major industries. Investments cannot be made in an index.

Indices are unmanaged, not available for direct investment, and do not represent the performance of a single fund.

Funds whose investments are concentrated in a specific industry or sector, such as technology, may be subject to a higher degree of market risk than funds whose investments are diversified. In addition, the Fund may be subject to specific risks of the technology sector, such as obsolescence.

The Fund is subject to the risks associated with its investments in emerging market securities, which tend to be more volatile and less liquid than securities traded in developed countries.

An investment in an exchange-traded fund (ETF) generally presents the same primary risks as an investment in a conventional fund (i.e., one that is not exchange traded) that has the same investment objectives, strategies and policies. The price of an ETF can fluctuate up or down, and the Fund could lose money investing in an ETF, if the prices of the securities owned by the ETF go down. In addition, ETFs may be subject to the following risks that do not apply to conventional funds: (i) the market price of an ETF's shares may trade above or below their net asset value; (ii) an active trading market for an ETF's shares may not develop or be maintained; or (iii) trading of an ETF's shares may be halted if the listing exchange's officials deem such action appropriate, the shares are delisted from the exchange, or the activation of market-wide "circuit breakers" (which are tied to large decreases in stock prices) halts stock trading generally.

Mid-cap investing involves greater risk not associated with investing in more established companies, such as greater price volatility, business risk, less liquidity and increased competitive threat. International investing involves special risks including currency risk, increased volatility of foreign securities, political risks and differences in auditing and other financial standards.

Small company stocks may be less liquid and subject to greater price volatility than larger capitalization stocks.
